

On behalf of our entire team, I would like to thank you for your attention and interest in the progress of our project. The last few months have been marked by important milestones that bring us closer to our main objective, which is to update the resource estimate of Gaspé Mines. Thanks to the collaboration of our partners and the support of the community, we have reached several milestones, although drilling is still to be expected during the fall and into December.

It is therefore my pleasure to present the current activities and to invite you to a public meeting during which the team will discuss with you. Your involvement and feedback are essential to the success of this project, and my team looks forward to seeing you soon.

**Robert Wares**

Chief Executive Officer, Osisko Metals

We invite you to an information meeting to present the progress of the work. This will be an opportunity to discuss next steps, answer your questions and gather your suggestions.

Upcoming public meeting Date : Tuesday,  
October 7, 2025 Time : 7:00 p.m. to 8:00 p.m.  
Location : Murdochville Community Centre

Your participation is valuable and helps to ensure the development of the project in harmony with the expectations of the community. We hope to see you there! You will be welcomed by the Osisko Metals team, including Ann Lamontagne and Alexandria Marcotte who hosted the last two meetings. The traditional coffee meeting with the president has been postponed to the beginning of 2026 when he will come to present the results of the resource update.

## Drilling Progress

Drilling is progressing smoothly and on schedule. The teams on the ground have already completed several drillings, allowing them to collect geological data. This information helps to improve our understanding of the deposit and update our resource model. We are satisfied with the pace of operations and remain attentive to ensuring that activities are carried out in compliance with safety standards and the environment. Currently, a total of 65,005 metres have been drilled since the start of the campaign and a total of 43,035 metres remains. We now have 10 drills on site to allow us to finish in December.

## Commitment to communities

Over the past few months, we have supported several local initiatives through sponsorships and donations, in order to encourage the cultural, sporting and social activities that animate Murdochville and its environment. In this section, we are pleased to share some photos of these highlights that demonstrate our desire to give back and contribute positively to the collective life.

In addition, we had the pleasure of welcoming more than 200 citizens during visits organized on the site between May and August. These meetings provided an opportunity to present the work in concrete terms, answer questions and exchange directly with community members. The enthusiasm and active participation of the visitors made these visits a real success.

In recent months, we have lent equipment to SOPFEU to help fight forest fires in the Gaspé sector. In addition, we have provided financial support to several local organizations and initiatives, including the **Cercle des fermières de Murdochville**, the **Club FADOQ Les Montagnards**, **La Maison des jeunes La Cellulose**, the **City of Murdochville**, the **Murdochville Golf Club**, the **Côte-de-Gaspé Health Foundation**, the **Alzheimer Society of Gaspésie-Îles-de-la-Madeleine**, the **Battle of the Prospectors**, the **Miller Gym** and the **Étoile des Monts Snowmobile Club**.

## Research project with the National Research Council of Canada

Osisko Metals is innovating with a research project aimed at the real-time detection of copper and molybdenum in water at the Gaspé Mines site. Last August, the National Research Council of Canada (NRC) research team was present on the Gaspé Mines site to prepare for the implementation of this unique project. The equipment will be assembled in the laboratory over the next few months and should be installed on the site in the spring of 2026. If all goes according to plan, the Gaspé Mines site will be the first in Canada to implement such a system.

## Progress of field inventories

In order to prepare for the definition of a possible project, we are currently carrying out several biological inventories in the territory. These relate to flora, avifauna, the aquatic environment and bats. The objective is to better understand the richness and diversity of natural environments in order to optimize the integration of the project into the environment.

## Reminder of safety instructions

In recent weeks, we have noticed the unauthorized presence of hikers and motorcyclists on the site. Significant exploration activities are taking place at the mine site. Drilling rigs are on site, which requires the movement of heavy machinery and the presence of several workers. To ensure your safety and that of the staff, walking or hiking on the mine site is **PROHIBITED**. Barriers and posters have been installed on the ground to clearly indicate the security perimeters to be respected. Thank you for your valuable collaboration! terrain pour indiquer clairement les périmètres de sécurité à respecter. Merci de votre précieuse collaboration !

## To contact us

We remind you that you can report any incident or observation that concerns you by phone at **1-888-883-3039** or by email at [murdochville@osiskometals.com](mailto:murdochville@osiskometals.com).
