

A look back at recent months in Murdochville

Over the past few months, our team have continued various activities related to the Gaspé Copper project.

The summer season also provided several opportunities to be present in the community and engage with residents and local stakeholders.

This newsletter provides a look back at some of the activities carried out in recent months, as well as an overview of the work currently underway in the field.

We invite you to read on.

Enjoy,

Robert Wares, Chef Executive Officer
Osisko Metals

More than 1,325 visits to the Osisko Space this summer

The Osisko Space had a particularly busy summer, welcoming more than 1,325 visitors over the summer season, with especially high attendance in the weeks following the Construction Holiday.

Murdochville residents, workers and visitors alike came to learn more about the Gaspé Copper project, ask questions or simply speak with members of our team.

A big thank you to Kelly Ann, Nathaniel and Anakyn, our students, who helped welcome visitors throughout the summer. With their return to school, the Osisko Space has now moved to its fall schedule and is **open by appointment only**. Our team remains available to meet with you and answer your questions.

THIS FALL

Osisko Space remains accessible by appointment, Monday to Friday, from 9 a.m. to 4 p.m.

To schedule a visit or a meeting,
contact Nathalie Lavoie

A second season of environmental surveys is coming to an end

Approximately 20 biologists were in the field this summer to continue environmental surveys and further our understanding of the area's wildlife, vegetation and natural environments.

The survey area was expanded compared with last year to cover a broader area. The data collected will be analyzed this winter and will inform upcoming project studies.

Additional surveys are planned for 2027 to complete data collection for certain environments and species.

Noise monitoring

Two sound level meters are continuously monitoring the acoustic environment in Murdochville. One is located on Curés-Allard Street and the other near the roundabout on des Trembles Street.

The data collected by our sound level meters show that the measures implemented have helped effectively manage noise associated with our activities.

Monitoring is ongoing. **Are you experiencing noise or another nuisance related to our activities? Let us know.** Your observations allow us to conduct the necessary checks and adjust our practices as needed.

A larger-than-expected drilling program

The 2026 drilling program is continuing at Gaspé Copper. Initially planned at 50,000 metres, the program will ultimately exceed this target. This year's drilling is intended, among other things, to better define the deposit and its boundaries.

For your safety and that of our personnel, we would like to remind you that **walking or hiking on the mine site is PROHIBITED**. A new automated gate and signs have been installed on site to clearly identify the safety perimeters that must be respected. Thank you for your valued cooperation!

More than 52 000
metres drilled

118 drill holes
completed

Projects and connections that matter

Since the beginning of the year more than 22,750 \$ has been provided in donations and sponsorships to community and regional initiatives.

Osisko Metals notably supported the Mawiomí of the Micmac Nation of Gespeg, a traditional gathering celebrating Mi'gmaq culture through songs, dances and sharing. We also contributed to the Maison des jeunes La Cellulose's year-end trip and the graduation prom. This summer, Espace Osisko hosted its first photo exhibition in the Rock Dunn room. Dedicated to the theme of caring and kindness, the exhibition highlighted the builders of Murdochville.

Osisko Metals also supported several activities, including the Bataille des Prospecteurs, a Hard Enduro competition, the walk in support of the Kidney Foundation of Canada, and the Alzheimer Society of Gaspésie-Îles-de-la-Madeleine golf tournament. Finally, the Chambre de commerce de La Côte-de-Gaspé golf tournament returned to Murdochville for a second year. Nathalie Lavoie and several members of our field team represented Osisko Metals at the event.

Focus group – the process continues

Over the past few months, we held a series of focus groups with residents and community stakeholders. While the Town is currently conducting its own engagement activities with the community, we remain in regular communication with the Town as our respective initiatives move forward. We plan to revisit the key findings from our focus groups as part of an upcoming information session. Further details will be shared in due course.
